```

```
# Name: Zachariah Kersey
```

```
# Date: February 9, 2026
```

```
# Program Description: Determines the spam risk of an email
```

```
## Function: analyzeEmail
```

```
Analyzes the words found in the email and generates a spam score.
```

Parameters:

None

Variables:

score (int): The spam score.

wordsFound (list): A list of spam keywords words found in the email.

SPAM_KEYWORDS (list): A list of commonly used spam keywords.

email (str): The email's contents inputted by the user.

Logic:

1. Receive email's contents from user input.
2. Loop over every spam keyword in SPAM_KEYWORDS.
3. Increase spam score if current spam keyword is found in the email.
4. Append the current spam keyword to the list of found words.
5. Return the spam score and list of keywords words found in the email.

Returns:

tuple:

spamScore (int): The spam score.

wordsFound (list): A list of words found in the email.

```
## Function: analyzeScore
```

```
Analyzes the spam score and displays the risk of the email.
```

Parameters:

score (int): The spam score.

found_keywords (list): A list of spam keywords found in the email.

Variables:

risk (str): The calculated risk based on the spam score.

Logic:

1. Print the calculated spam score.
2. Set the risk value based on the spam score.
3. Print the risk value.
4. Print any spam keywords found in the email or none if none found.

Returns:

None
