

Technical Design Document: ZachariahKersey_ProgrammingExercise_6

Name: Zachariah Kersey

Date: March 8, 2026

Program Description: Validates a user's personal information

Function: main

Prompts user from their personal information, then validates it

Parameters:

None

Variables:

PHONE_NUMBER_REGEX (str): Regular expression to validate the phone number

SSN_REGEX (str): Regular expression to validate the SSN

ZIP_CODE_REGEX (str): Regular expression to validate the zip code

phoneNumber (str): User-inputted phone number

ssn (str): User-inputted social security number

zipCode (str): User-inputted zip code

Logic:

1. Prompt user for phone number, ssn, and zip code
2. Print the validity of the user's phone number, ssn, and zip code

Function: printIfValid

Evaluates if the provided value is valid or not

Parameters:

label (str): Label to check

is_valid (bool): True or False based on value's validity

Variables:

None

Logic:

1. Prints if the label is valid or not based on whether its True/False

Returns:

None

Function: validateValue

Validate a phone based on its format

Parameters:

pattern (regex): Regex to check against the passed value variable

value (str): Value to check

Variables:

isValid (bool): True or False based on value's validity

Logic:

1. Check the provided value against the regex and convert to a boolean
2. Return the boolean value

Returns:

isValid (bool): True if value matches pattern, False otherwise

```
Enter a phone number: 941-727-6100
Enter a SSN: 123-45-6789
Enter a zip code: 34212
```

```
---Verification---
Phone Number is valid
SSN is valid
Zip Code is valid
```

```
Process finished with exit code 0
```

```
Enter a phone number: 941-727-61000
Enter a SSN: 123-456-7890
Enter a zip code: 34211-1
```

```
---Verification---
Phone Number is not valid
SSN is not valid
Zip Code is not valid
```

```
Process finished with exit code 0
```
